

POLAR BEAR GIFTS · ANCHORAGE, AK

Where we want to take this — shaped by what Rachel & Jordan said

For the management team · what we heard on the PBG-Ai call, and where we'd love to take it — pending your green-light.

WHAT WE HEARD → WHERE IT COULD GO

R Rachel Robinson

15:10

"I have a sell-through, a dropped, and a disco tag."

WHERE WE'D TAKE IT

Build the system around **your exact three tags** — so closeouts don't blow up alerts, only reorderables do.

R Rachel Robinson

~03:45

"There are companies that we can reorder from... that do get lost in the shuffle sometimes."

WHERE WE'D TAKE IT

A nightly **reorder-alert list** that would flag reorderables running low — so nothing falls through the shuffle.

R Rachel Robinson

~19:30

"We can just get a dashboard of, in the morning, this store needs this many of this sweatshirt."

WHERE WE'D TAKE IT

A **one-glance morning dashboard**, per store, per size — designed to be ready before you open.

J Jordan Michaels

~19:30

"That inventory piece is, like, that is the number one."

WHERE WE'D TAKE IT

Start with inventory as **Phase 1** — clean counts first, everything else stands on top.

J Jordan Michaels

21:55

"Pull it all down every single day... at 1 AM every day."

WHERE WE'D TAKE IT

A **1 AM auto-sync from Lightspeed**, saved locally — designed for the 10/2 Mbps store line.

J Jordan Michaels

17:21

"They were getting sold as the wrong size — way negative on one size, way over on the other."

WHERE WE'D TAKE IT

Dashboard could **red-flag suspicious size discrepancies and negative inventory** — catching mis-scans the next day, not next quarter.

J Jordan Michaels

22:00

"AI should be smart enough to look at the trends, look at all the previous year sales data, and give us a much more accurate count for those orders."

WHERE WE'D TAKE IT

Phase 3 (later): AI reorder suggestions, by size, season-aware — learning what Smalls vs Mediums sell when.

R Rachel Robinson

24:28

"Day one, Jordan, you'd mostly want to do soft goods... make sure each store has all the sizes of our top selling soft goods."

WHERE WE'D TAKE IT

Phase 2 dashboard would **launch with soft goods first** (sweatshirts & tees), then expand.

WHAT THIS COULD SAVE

~6 hrs / wk

of manual cross-store counting & reconciliation given back to the team

2–4 / mo

mid-season reorderable stockouts caught early during peak — recovered sales on items that would have just gone quiet

Fewer

"sorry, we're out" calls and negative reviews from website orders on items we didn't actually have

Directional estimates based on the workflow Rachel and Jordan described — to be confirmed after the July site visit if we move forward.

The shape we're proposing: nightly auto-sync → a morning dashboard built around Rachel's three tags → size-aware alerts so wrong-size scans stop costing us → AI reorder suggestions next. **If we get a green-light**, a site visit after July 12 (around Rachel's schedule) would lock in Phases 1–2.
